GREENFIT THERMEX PLUS+

PPR Piping Systems

Greenfit Thermex Plus pipes & fittings are manufactured using polypropylene random co-polymer (PP-R). PP-R is commonly used in drinking water installations, hot water and radiator heating systems and many kind of industrial liquid transportation systems. The traditional line of monolayer Greenfit PP-R pipes has been enlarged by introducing new Greenfit Thermex Plus system. Greenfit Thermex Plus pipe has higher stiffness & lower thermal expansion (3 times lower than conventional monolayer PP-R pipes).

Pipes as per
IS: 15801
(20 to 160mm)

Pipes as per
DIN: 8077/8078
(180 to 315mm)

Fittings as per
DIN 16962

Note: Insulation is Necessary at Sub Zero Temperature.

FOAMFIT®

Underground Drainage Piping Systems that
Withstands Heavy Load

Foamfit underground drainage pipes are essentially multilayer pipes which have outer and inner layers of conventional PVC and middle layer of foamed PVC. Outer and inner layers are designed to take the load and middle layer of foamed PVC gives firmness and maintains the shape of the pipe under load. This also reduces total weight of pipe and makes it light in weight when compared to solid wall PVC pipes. Foamfit pipes are manufactured as per European and International standards for drainage and sewerage.

RAINFIT[®]

Roofwater Systems for
Collection and Disposal

Rainfit – Roofwater Systems are used for collection & disposal of rainwater. The collected rainwater can be directed to storage destinations like pits, borewells, shafts and wells to augment the water level. The inert property of the material used in the making of PVC pipes helps it to not support bacterial and fungal growth.
